

Scrap Collector™ Model S914 HOW IT WORKS

- 1 Hot and cold water pass through a water blender set at 107° F.
- 2 The blended water enters the tank reservoir at the rate of 2 gallons per minute.

- 3 The Collector pump recirculates water through the gusher tube.
- 4 As dishes are passed through the water plume, they are scrapped and pre-rinsed at the same time.
- 5 Food waste is carried through the basin and into the scrap basket.
- 6 Soluble food waste washes through the holes in the scrap basket into the tank reservoir. Insoluble and fibrous waste is retained in the scrap basket.

- 7 Excess waste water flows into the drain.
